JIO-MART PRODUCT DATA

Overview:

This dataset contains product information from JioMart, including categories, prices, and customer ratings. The original dataset contained missing values in the "rating" column, which have been replaced with the mean rating to ensure a complete dataset. The cleaned version is suitable for various machine learning and data analysis tasks.

Dataset Information:

- **Total Records:** X (Adjust based on the file after cleaning)
- **Columns:**
    - **Index:** Unique identifier for each product.
    - **Product:** Name and description of the product.
    - **Category:** The category to which the product belongs.
    - **Sale Price:** The sale price of the product in Indian Rupees.
    - **Market Price:** The market price of the product in Indian Rupees.
    - **Type:** A subcategory or type of product.
    - **Rating:** Customer rating of the product (out of 5).

Data Cleaning Process:

- **Missing Ratings:** The original dataset contained 314 missing values in the "rating" column. These were replaced with the mean rating to avoid data loss during analysis.

Usage:

This dataset can be used for:

- Price comparison analysis
- Customer sentiment or rating prediction models
- Analysis of product categories and pricing strategies

File Information:

- **jiomart.csv**: The cleaned version of the dataset with no missing values.
